

# Versatile Blown Insulation

When you need insulation in a range of thicknesses and densities, 90% cellulose insulation from Illinois Valley Insulation is the way to go. Our expert crew will ensure that your home or other structure is protected throughout with properly applied materials.

## Perfect Insulating Materials for Difficult Spaces

The main benefit of blown insulation is that you can get completely uniform coverage even in hard-to-reach spots. Because it can be blown right into areas that you could never reach, the insulation fully fills spaces in your walls, ceilings, and more.

The other major function of blown insulation is its adaptability. You can have us install it in whatever thickness and density required to reach the R-value you want. R-value is an insulation material's resistance to heat flow and the higher the R-value the greater the insulating power.

Just let us know the level of temperature control you're after and we'll make the appropriate application!
